

BEEKEEPING INDUSTRY, 1948-49

The following statement shows the remarkable increase that has been made in the beekeeping industry during recent years, although the actual progress is not clearly shown because it is one of those industries where there are alternate good and bad seasons.

Year	Bee- keepers	Hives			Production		
		Pro- ductive	Unpro- ductive	No.	Honey	Beeswax	Value

(a) Not recorded

The number of beekeepers had not been recorded for earlier years but has been fairly constant during the past four years.

The number of hives had fallen considerably during the pre-war years but the decrease has since been much more than made up and the present number is a record.

Allowing for the alternating good and bad seasons, it can be said that the production of honey and beeswax is practically three times greater than it was 10 years ago. The 1948-49 honey production was over 2,000,000 lbs. greater than the previous record of 2 years earlier and more than twice the earlier record production in 1940-41. The 1948-49 production of honey and beeswax is valued at a little over £300,000 this also being a record. Both quantities and prices have increased.

The export year to 30th June does not coincide with the production year as some of the current year's production is not exported until after 30th June. Quantities exported overseas usually were small but have increased considerably in recent years. The totals for the last 3 years have been as follows:- 1946-47 3,832,384 lbs., 1947-48 3,159,142 lbs. and 1948-49 5,600,824 lbs. most of it being sent to the United Kingdom.
